

College Mini-Project

INTERACTIVE GEOGRAPHICAL HERITAGE MAP OF INDIA

Prepared By
Manya Goel

Guided By
Ms. Disha

Inderprastha Engineering College, Ghaziabad

Problem Statement

THE CHALLENGE

STATIC LEARNING

Traditional methods relying on textbooks and flat diagrams treat cultural history as fixed data points. They fail to evoke the living, spatial, and visual reality of heritage sites across India.

LOST DEPTH

Without interactive exploration or multisensory engagement, learners lose the rich geographical and narrative context that connects diverse monuments into a unified cultural story.

Proposed Solution

DYNAMIC WEB CARTOGRAPHY

CLICKABLE DIGITAL MAP

An interactive spatial canvas allowing users to seamlessly navigate India's geography, unlocking real-time layers of cultural data with a single click.

HERITAGE & FOLK ARTS

Directly highlights GI-tagged products, indigenous crafts, and regional folk art forms, connecting local traditions to their true geographical origins.

Interactive Features

THE WOW FACTOR

MULTISENSORY AUDIO

Selecting a state triggers an instant 5-second audio snippet, playing authentic traditional local music to create an immersive, regional cultural connection.

INSTANT ENGAGEMENT

Automated, seamless soundscapes transport users directly to the heart of the region's heritage without disrupting visual exploration or cartographic navigation.

Implementation

TECHNOLOGY STACK

HTML5 / CSS3

Powers the modern, responsive user interface and seamless aesthetic layouts.

VANILLA JS

Delivers lightweight, high-performance client-side interactivity without dependencies.

LEAFLET.JS

Drives the interactive, mobile-friendly interactive mapping engine layer.

HTML5 AUDIO

Native Audio API handles seamless, dynamic playback for traditional soundscapes.

DATA ARCHITECTURE

GEOJSON LAYER

Renders precise geographical boundaries. Stores state polygons and coordinates to dynamically draw and animate the interactive vector map.

```
data/india_states.geojson
```

LOCAL JSON ARRAY

Houses rich cultural datasets per state: textual descriptions, GI-tag details, visual image URLs, and 5-second ambient audio snippet paths.

```
const stateData = [...]
```

EXPECTED IMPACT

UNIVERSAL ACCESSIBILITY

Designed with a highly visual, intuitive interface accessible to everyone across diverse age groups and visual technical literacy levels.

SCALABLE DATABASE

Structured for seamless expansion, making it simple to incorporate additional regional cuisines, dialects, and languages over time.
